

Welcome to ICAARE

Are you between 13 and 19 years old? We need your help!![Click here](#) to do a survey about participating in medical research.

About ICAARE

The Saskatchewan Institute of Child and Adolescent Arthritis Research [ICAARE] comprises a unique array of studies bridging gaps between pediatric and adult rheumatic diseases. ICAARE believes that by collaborating with a variety of researchers, we will effectively advance knowledge that improves patient care and outcomes and strengthens research capacity by mentoring colleagues, training students and generating new infrastructure resources.

The four cornerstones of ICAARE are research, knowledge translation, training and infrastructure capacity development. ICAARE will embrace and integrate biochemical, clinical, social, cultural, environmental and population health research resulting in improved health care delivery. ICAARE will facilitate interdisciplinary collaboration amongst scientists within the College of Medicine and from a variety of other departments and colleges within the University of Saskatchewan. Further, the creation of a discrete Centre will help promote the Institute's leadership role nationally and internationally to improve the health and well-being of children and adults with rheumatic diseases. **New Blood Marker Tested in Juvenile Arthritis** The following research presented at the American College of Rheumatology Annual Meeting November 10th, 2015: Serum 14-3-3 eta is Present in Juvenile Idiopathic Arthritis and is not Uniquely Associated with RF+ Polyarthritis. Alan M. Rosenberg, Walter P. Maksymowych, Y Gui, Anthony Marotta.
